

NEW NLB8488 Quick-Change Cartridge Bi-Mode™ Valve

The simple to replace,
disposable cartridge allows
users to rebuild the valve in
Just 60 Seconds!

The NLB8488 next generation Bi-Mode™ valve combines the current Bi-Mode valve features with the benefit of quick-change cartridge capabilities. The NLB8488's unique disposable cartridge design **allows operators to rebuild the valve in less than 60 seconds at the job site** for fast, easy field maintenance. Additionally, the valve is more compact for ease of mobility and more reliable.

The NLB8488 Bi-Mode valve acts as a control unit for UHP rotating hand lances and operates at ultra-high pressures up to 40,000 psi (2,800 bar) and flows up to 10 gpm (37.9 lpm). It includes an air filter, regulator and lubricator for the lance air motor operation. **Switching from single-lance to dual-lance operation is easy.** To operate two lances at once, simply connect another Bi-Mode valve and lance to the system, using a CM13027 "Y" adapter. A DM14150 hose assembly is required to connect a rotating lance to a Bi-Mode valve.

Features include:

- More reliable and easier to maintain with new quick-change cartridge design.
- Compact, rounded frame provides ease of movement.
- Can easily switch from single to dual-lance operation with simple "Y" adapter and nozzle change.
- Valve contains air filter, regulator and lubricator for hand lance air motor lubrication.
- Rated for ultra-high pressures up to 40,000 psi (2,800 bar) and flows up to 10 gpm (37.9 lpm).
- Stainless steel quick-change cartridge (BM24521).
