

The new NLB 3750-150 Torrent™ self-rotating tank cleaning head offers superior 3-D cleaning action for tanks, reactors and a variety of vessels. This new nozzle is rated for pressures of up to 10,000 psi (700 bar), flows up to 150 gpm (567 lpm). It features newly designed seals and upgraded bearings to increase reliability, and an all new orifice style to greatly improve its reach and power.

The Torrent incorporates the dual cleaning action of the rotating head and the revolving nozzles, powered by the reaction force of the high pressure water jets, to provide complete, 360° spherical cleaning coverage.

NLB's 3-D heads make it unnecessary for workers to enter tanks during the cleaning process and eliminate the need for hazardous chemicals. This enhances worker safety, and reduces the amount of time that is needed to effectively clean the interior of the vessel. For larger vessels, the nozzles can be attached to a telescoping lance for positioning adjustment and angle articulation.

<b>Pressure</b>	4,000-10,000 psi
<b>Max. Flow</b>	150 gpm (567 lpm)
<b>Inlet Connection</b>	1-1/4-11-1/2" NPT
<b>Weight</b>	48 lbs. (22 kg)
<b>Length</b>	20" (51 cm)
<b>Max. Width</b>	14" (36 cm)

**Features:**

- Up to 10,000 psi operating pressure.
- All new seal and bearing design increases reliability.
- Utilizes a new nozzle style that vastly improves cleaning efficiency.
- Increases safety by making it unnecessary for personnel to enter a vessel.
- Flow rates range up to 150 gpm.
- Optional cage available to protect the nozzle in the event of contact.

*Patent Pending*
