

NLB SAFLEX™ -2001

Wireless X-Y Positioner

The NLB SAFLEX-2001XY Positioning device is designed to be used in conjunction with the Saflex-2001 and provides the operator a simple and easy way to automate the cleaning of heat exchanger tube bundles. The XY positioning machine mounts to the face of the tube bundle and is used to move the flexible cleaning lances into position. The lances can then be driven into the tubes in order to clean them. The XY machine is air powered and operated remotely via a handheld operator control box. The X & Y beams of the machine have been designed to come apart to facilitate ease of installation and transportation of the unit.

The X-Y positioner can be secured to the face of a bundle via the included beam clamps, which capture the flange of the bundle, or the optional expanding mandrels.

U.S. Patent Pending
Unit shown with optional features

The remote features a switches to control the high pressure water, the lance feed/retract action, and the X-Y positioner up/down and left/right movement.

The X-Y positioner is attached to the tube bundle by clamping it to the bundle flanges.
